Linux Ubuntu 22.4.5 Manual Pages on command 'runc-kill.8'

$ man runc-kill.8

runc-kill (8"")   runc-kill (8"")

NAME

    runc-kill - send a specified signal to container

SYNOPSIS

    runc kill [--all|-a] container-id [signal]

DESCRIPTION

    By default, runc kill sends SIGTERM to the container's initial process only.

    A different signal can be specified either by its name (with or without the SIG

    prefix), or its numeric value. Use kill(1) with -l option to list available

    signals.

OPTIONS

    --all|-a : Send the signal to all processes inside the container.

EXAMPLES

    The following will send a KILL signal to the init process of the ubuntu01

    container:

```
# runc kill ubuntu01 KILL
```

SEE ALSO

runc(1).

runc-kill (8"")
