Rocky Enterprise Linux 9.2 Manual Pages on command 'scsi_mandat.8'

$ man scsi_mandat.8

SCSI_MANDAT(8)   SG3_UTILS   SCSI_MANDAT(8)

NAME

    scsi_mandat - check SCSI device support for mandatory commands

SYNOPSIS

    scsi_mandat [--help] [--log] [--quiet] [--verbose] DEVICE

DESCRIPTION

    This bash shell script calls several SCSI commands on the given DEVICE. These SCSI com?

    mands are considered mandatory (although that varies a little depending on which stan?

    dard/draft the DEVICE complies with). The results of each test and a pass/fail count are

    output.

OPTIONS

    Arguments to long options are mandatory for short options as well.

    -h, --help

        print out the usage message then exit.

    -L, --log

        the output to stderr (from each SCSI command executed) is appended to a file called

        'scsi_mandat.err' in the current working directory.

    -q, --quiet

        the amount of output is reduced and typically only the pass/fail count is output.

    -v, --verbose

        increase level or verbosity.

EXIT STATUS

    The exit status of this script is the number of "bad" errors found. So an exit status of

0 means all mandatory SCSI commands worked as expected.
