Rocky Enterprise Linux 9.2 Manual Pages on command 'serialver.1'

$ man serialver.1

SERIALVER(1)   JDK Commands   SERIALVER(1)

NAME

   serialver - return the serialVersionUID for one or more classes in a form suitable for

   copying into an evolving class

SYNOPSIS

   serialver [options] [classnames]

   options

      This represents the command-line options for the serialver command. See Options

      for serialver.

   classnames

      The classes for which serialVersionUID is to be returned.

DESCRIPTION

   The serialver command returns the serialVersionUID for one or more classes in a form suit?

   able for copying into an evolving class. When called with no arguments, the serialver

   command prints a usage line.

OPTIONS FOR SERIALVER

   -classpath path-files

      Sets the search path for application classes and resources. Separate classes and

      resources with a colon (:).

   -Joption

      Passes the specified option to the Java Virtual Machine, where option is one of the

      options described on the reference page for the Java application launcher. For ex?

      ample, -J-Xms48m sets the startup memory to 48 MB.

NOTES

The serialver command loads and initializes the specified classes in its virtual machine, and by default, it doesn't set a security manager. If the serialver command is to be run with untrusted classes, then a security manager can be set with the following option:

-J-Djava.security.manager

When necessary, a security policy can be specified with the following option:

-J-Djava.security.policy=policy_file

JDK 21   2023   SERIALVER(1)
