Rocky Enterprise Linux 9.2 Manual Pages on command 'strchrnul.3'

$ man strchrnul.3

STRCHR(3)   Linux Programmer's Manual   STRCHR(3)

NAME

    strchr, strrchr, strchrnul - locate character in string

SYNOPSIS

    #include <string.h>

    char *strchr(const char *s, int c);

    char *strrchr(const char *s, int c);

    #define _GNU_SOURCE   /* See feature_test_macros(7) */

    #include <string.h>

    char *strchrnul(const char *s, int c);

DESCRIPTION

    The strchr() function returns a pointer to the first occurrence of the character c in the

    string s.

    The strrchr() function returns a pointer to the last occurrence of the character c in the

    string s.

    The strchrnul() function is like strchr() except that if c is not found in s, then it re?

    turns a pointer to the null byte at the end of s, rather than NULL.

    Here "character" means "byte"; these functions do not work with wide or multibyte charac?

    ters.

RETURN VALUE

    The strchr() and strrchr() functions return a pointer to the matched character or NULL if

    the character is not found. The terminating null byte is considered part of the string,

    so that if c is specified as '\0', these functions return a pointer to the terminator.

The strchrnul() function returns a pointer to the matched character, or a pointer to the null byte at the end of s (i.e., s+strlen(s)) if the character is not found.

VERSIONS

strchrnul() first appeared in glibc in version 2.1.1.

ATTRIBUTES

For an explanation of the terms used in this section, see attributes(7).

```
