$ man vm86.2

VM86(2)   Linux Programmer's Manual   VM86(2)

NAME

   vm86old, vm86 - enter virtual 8086 mode

SYNOPSIS

   #include <sys/vm86.h>

   int vm86old(struct vm86_struct *info);

   int vm86(unsigned long fn, struct vm86plus_struct *v86);

DESCRIPTION

   The system call vm86() was introduced in Linux 0.97p2. In Linux 2.1.15 and 2.0.28, it was

   renamed to vm86old(), and a new vm86() was introduced. The definition of struct

   vm86_struct was changed in 1.1.8 and 1.1.9.

   These calls cause the process to enter VM86 mode (virtual-8086 in Intel literature), and

   are used by dosemu.

   VM86 mode is an emulation of real mode within a protected mode task.

RETURN VALUE

   On success, zero is returned. On error, -1 is returned, and errno is set appropriately.

ERRORS

   EFAULT This return value is specific to i386 and indicates a problem with getting user-

      space data.

   ENOSYS This return value indicates the call is not implemented on the present architec?

      ture.

   EPERM Saved kernel stack exists. (This is a kernel sanity check; the saved stack should

      exist only within vm86 mode itself.)

CONFORMING TO

This call is specific to Linux on 32-bit Intel processors, and should not be used in pro?

grams intended to be portable.

COLOPHON

This page is part of release 5.10 of the Linux man-pages project. A description of the

project, information about reporting bugs, and the latest version of this page, can be

found at https://www.kernel.org/doc/man-pages/.
