Net::DNS::RR::RT(3pm) User Contributed Perl Documentation Net::DNS::RR::RT(3pm)

NAME

Net::DNS::RR::RT - DNS RT resource record

SYNOPSIS

```
use Net::DNS;
```

```
$rr = new Net::DNS::RR('name RT preference intermediate');
```

DESCRIPTION

Class for DNS Route Through (RT) resource records.

METHODS

The available methods are those inherited from the base class augmented by the type-specific methods defined in this package.

Use of undocumented package features or direct access to internal data structures is discouraged and could result in program termination or other unpredictable behaviour.

preference

```
$preference = $rr->preference;
```

```
$rr->preference( $preference );
```

A 16 bit integer representing the preference of the route.

Smaller numbers indicate more preferred routes.

intermediate

```
$intermediate = $rr->intermediate;
```

```
$rr->intermediate( $intermediate );
```

The domain name of a host which will serve as an intermediate in reaching the host specified by the owner name. The DNS RRs associated with the intermediate host are expected to include at least one A, X25, or ISDN record.
