Package::Stash::PP(3pm) User Contributed Perl Documentation Package::Stash::PP(3pm)

NAME

Package::Stash::PP - pure perl implementation of the Package::Stash API

VERSION

version 0.38

SYNOPSIS

```
use Package::Stash;
```

DESCRIPTION

This is a backend for Package::Stash implemented in pure perl, for those without a compiler or who would like to use this inline in scripts.

SEE ALSO

? Class::MOP::Package

This module is a factoring out of code that used to live here

SUPPORT

You can find this documentation for this module with the perldoc command.

```
perldoc Package::Stash
```

You can also look for information at:

? CPAN Ratings

<<http://cpanratings.perl.org/d/Package-Stash>>

? RT: CPAN's request tracker

<<http://rt.cpan.org/NoAuth/Bugs.html?Dist=Package-Stash>>

? Search CPAN

<http://search.cpan.org/dist/Package-Stash>

BUGS

? `remove_symbol` also replaces the associated typeglob

This can cause unexpected behavior when doing manipulation at compile time - removing subroutines will still allow them to be called from within the package as subroutines (although they will not be available as methods). This can be considered a feature in some cases (this is how `namespace::clean` works, for instance), but should not be relied upon - use `"remove_glob"` directly if you want this behavior.

? Some minor memory leaks

The pure perl implementation has a couple minor memory leaks (see the TODO tests in `t/20-leaks.t`) that I'm having a hard time tracking down - these may be core perl bugs, it's hard to tell.

Bugs may be submitted through the RT bug tracker

<https://rt.cpan.org/Public/Dist/Display.html?Name=Package-Stash> (or bug-Package-Stash@rt.cpan.org <mailto:bug-Package-Stash@rt.cpan.org>).
