btattach(1)                   Linux System Administration                   btattach(1)

### NAME

btattach - attach serial devices to BlueZ stack

### SYNOPSIS

btattach [-B device] [-A device] [-P protocol] [-R]

### DESCRIPTION

btattach is used to attach a serial UART to the Bluetooth stack as a transport interface.

### OPTIONS

-B device, --bredr device

Attach a BR/EDR controller.

-A device, --amp device

Attach an AMP controller.

-P protocol, --protocol protocol

Specify the protocol type for talking to the device. Supported values are:

? h4

? bcsp

? 3wire

? h4ds

? ll

? ath3k

? intel

? bcm

? qca

-R Set the device into raw mode (the kernel and bluetoothd will ignore it).
