

Rocky Enterprise Linux 9.2 Manual Pages on command 'codepage.1'

C:\>man codepage.1

CODEPAGE(1) Debian Linux CODEPAGE(1)

NAME

codepage - extract a codepage from an MSDOS codepage file

SYNOPSIS

codepage [-c] [[-l] | -L] [[-a | nnn] <file.cpi>

DESCRIPTION

The codepage command extracts codepages from an MSDOS codepage file.

OPTIONS

- c Input file is a single codepage
- L Print header info (you don't want to see this).
- l List all codepages contained in the file.
- a Extract all codepages from the file
- nnn (3 digits): extract codepage nnn from the file.

EXAMPLE

To create a file 850.cp, with codepage 850 from a file ega.cpi, execute:

```
codepage ega.cpi 850
```
