C:|>man crc32.1

CRC32(1) General Commands Manual CRC32(1)

NAME

 crc32 - compute CRC-32 checksums for the given files

SYNOPSIS

 crc32 filename [filename ...]

DESCRIPTION

 crc32 is a simple utility that calculates the CRC-32 checksum for each of the given files.

 Note that the CRC-32 checksum is merely used for error detection in transmission and storage. It is not intended to guard against the malicious modification of files (i.e., it is not a cryptographic hash).

 This utility is supplied with the Archive::Zip module for Perl.

SEE ALSO

 Archive::Zip(3pm).

AUTHOR

 The Archive::Zip module was written by Ned Konz.

 This manual page was prepared by Ben Burton <bab@debian.org> for the Debian GNU/Linux system (but may be used by others).
