C:\>man dmmp_context_log_func_set.3

dmmp_context_log_func_sDevice Mapper Multipath API - libdmmp Mdmmp_context_log_func_set(3)

NAME

dmmp_context_log_func_set - Set log handler function.

SYNOPSIS

```
void dmmp_context_log_func_set (struct dmmp_context *ctx, void (*log_func) (struct
dmmp_context *ctx, int priority, const char *file, int line, const char *func_name,
const char *format, va_list args));
```

ARGUMENTS

ctx Pointer of 'struct dmmp_context'. If this pointer is NULL, your program will be terminated by assert.

log_func Pointer of log handler function. If set to NULL, all log will be ignored.

DESCRIPTION

Set custom log handler. The log handler will be invoked when log message is equal or more important (less value) than log priority setting. Please check manpage libdmmp.h(3) for detail usage.

RETURN

void
