

Rocky Enterprise Linux 9.2 Manual Pages on command 'git-mktag.1'

C:\>man git-mktag.1

GIT-MKTAG(1) Git Manual GIT-MKTAG(1)

NAME

git-mktag - Creates a tag object

SYNOPSIS

git mktag

DESCRIPTION

Reads a tag contents on standard input and creates a tag object that can also be used to sign other objects.

The output is the new tag's <object> identifier.

TAG FORMAT

A tag signature file, to be fed to this command's standard input, has a very simple fixed format: four lines of

object <sha1>

type <typename>

tag <tagname>

tagger <tager>

followed by some optional free-form message (some tags created by older Git may not have tagger line). The message, when exists, is separated by a blank line from the header. The message part may contain a signature that Git itself doesn't care about, but that can be verified with gpg.
