

Rocky Enterprise Linux 9.2 Manual Pages on command 'go-vet.1'

C:~>man go-vet.1

GO-VET(1) General Commands Manual GO-VET(1)

NAME

go - tool for managing Go source code

SYNOPSIS

go vet [-n] [-x] [packages]

DESCRIPTION

Vet runs the Go vet command on the packages named by the import paths.

For more about vet, see 'godoc vet'.

For more about specifying packages, see go-packages(7).

To run the vet tool with specific options, run 'go tool vet'.

OPTIONS

-n The -n flag causes tool to print the command that would be executed but not execute it.

-x The -x flag causes clean to print remove commands as it executes them.

SEE ALSO

go-fmt(1), go-fix(1).

AUTHOR

This manual page was written by Michael Stapelberg <stapelberg@debian.org>, for the Debian project (and may be used by others).
