**C:\>man gvfsd-metadata.1**

GVFSD-METADATA(1)                    User Commands                    GVFSD-METADATA(1)

### NAME

gvfsd-metadata - Metadata daemon for gvfs

### SYNOPSIS

gvfs-metadata [OPTION...]

### DESCRIPTION

gvfsd-metadata is a daemon acting as a write serialiser to the internal gvfs metadata storage. It is autostarted by GIO clients when they make metadata changes. Read operations are done by client-side GIO code directly, and don't require the daemon to be running.

The gvfs metadata capabilities are used by the nautilus file manager, for example.

### OPTIONS

-h, --help

Prints a short help text and exits.

--version

Shows the version number and exits.

-r, --replace

Replace the currently running instance.

### EXIT STATUS

On success 0 is returned, a non-zero failure code otherwise.

### FILES

\$XDG\_DATA\_HOME/gvfs-metadata

The directory where the gvfs metadata database files are stored
