

## ***Rocky Enterprise Linux 9.2 Manual Pages on command 'ip-netconf.8'***

**C:\>man ip-netconf.8**

IP-NETCONF(8)                      Linux                      IP-NETCONF(8)

### NAME

ip-netconf - network configuration monitoring

### SYNOPSIS

ip [ ip-OPTIONS ] netconf show [ dev NAME ]

### DESCRIPTION

The ip netconf utility can monitor IPv4 and IPv6 parameters (see `/proc/sys/net/ipv[4|6]/conf/[all|DEV]/`) like forwarding, `rp_filter`, `proxy_neigh`, `ignore_routes_with_linkdown` or `mc_forwarding` status.

If no interface is specified, the entry all is displayed.

ip netconf show - display network parameters

dev NAME

the name of the device to display network parameters for.
