

## ***Rocky Enterprise Linux 9.2 Manual Pages on command 'ip6tables-save.8'***

**C:\>man ip6tables-save.8**

**IPTABLES-SAVE(8)                      iptables 1.8.4                      IPTABLES-SAVE(8)**

### **NAME**

iptables-save ? dump iptables rules

ip6tables-save ? dump iptables rules

### **SYNOPSIS**

iptables-save [-M modprobe] [-c] [-t table] [-f filename]

ip6tables-save [-M modprobe] [-c] [-t table] [-f filename]

### **DESCRIPTION**

iptables-save and ip6tables-save are used to dump the contents of IP or IPv6 Table in easily parseable format either to STDOUT or to a specified file.

**-M, --modprobe modprobe\_program**

Specify the path to the modprobe program. By default, iptables-save will inspect /proc/sys/kernel/modprobe to determine the executable's path.

**-f, --file filename**

Specify a filename to log the output to. If not specified, iptables-save

will log to STDOUT.

**-c, --counters**

include the current values of all packet and byte counters in the output

**-t, --table tablename**

restrict output to only one table. If the kernel is configured with auto?

matic module loading, an attempt will be made to load the appropriate module

for that table if it is not already there.

If not specified, output includes all available tables.

## BUGS

None known as of iptables-1.2.1 release

## AUTHORS

Harald Welte <laforge@gnumonks.org>

Rusty Russell <rusty@rustcorp.com.au>

Andras Kis-Szabo <kisza@sch.bme.hu> contributed ip6tables-save.
