ISWCNTRL(3) Linux Programmer's Manual ISWCNTRL(3)

NAME

iswcntrl - test for control wide character

SYNOPSIS

```
#include <wctype.h>

int iswcntrl(wint_t wc);
```

DESCRIPTION

The `iswcntrl()` function is the wide-character equivalent of the `isctrl(3)` function. It tests whether `wc` is a wide character belonging to the wide-character class "cntrl".

The wide-character class "cntrl" is disjoint from the wide-character class "print" and therefore also disjoint from its subclasses "graph", "alpha", "upper", "lower", "digit", "xdigit", "punct".

For an unsigned char `c`, `isctrl(c)` implies `iswcntrl(btowc(c))`, but not vice versa.

RETURN VALUE

The `iswcntrl()` function returns nonzero if `wc` is a wide character belonging to the wide-character class "cntrl". Otherwise, it returns zero.

ATTRIBUTES

For an explanation of the terms used in this section, see `attributes(7)`.
