**C:\>man iswxdigit.3**

ISWXDIGIT(3)                      Linux Programmer's Manual                      ISWXDIGIT(3)

### NAME

iswxdigit - test for hexadecimal digit wide character

### SYNOPSIS

```
#include <wctype.h>

int iswxdigit(wint_t wc);
```

### DESCRIPTION

The `iswxdigit()` function is the wide-character equivalent of the `isxdigit(3)` function. It tests whether `wc` is a wide character belonging to the wide-character class "xdigit".

The wide-character class "xdigit" is a subclass of the wide-character class "alnum", and therefore also a subclass of the wide-character class "graph" and of the wide-character class "print".

Being a subclass of the wide-character class "print", the wide-character class "xdigit" is disjoint from the wide-character class "cntrl".

Being a subclass of the wide-character class "graph", the wide-character class "xdigit" is disjoint from the wide-character class "space" and its subclass "blank".

Being a subclass of the wide-character class "alnum", the wide-character class "xdigit" is disjoint from the wide-character class "punct".

The wide-character class "xdigit" always contains at least the letters 'A' to 'F', 'a' to 'f' and the digits '0' to '9'.

## RETURN VALUE

The `iswxdigit()` function returns nonzero if `wc` is a wide character belonging to the wide-character class "xdigit". Otherwise, it returns zero.

## ATTRIBUTES

For an explanation of the terms used in this section, see `attributes(7)`.

?`iswxdigit()` ? Thread safety ? MT-Safe locale ?

??

## CONFORMING TO

POSIX.1-2001, POSIX.1-2008, C99.

## NOTES

The behavior of `iswxdigit()` depends on the `LC_CTYPE` category of the current locale.

## SEE ALSO

`iswctype(3)`, `isxdigit(3)`
