LRINT(3) Linux Programmer's Manual LRINT(3)

NAME

lrint, lrintf, lrintl, llrint, llrintf, llrintl - round to nearest integer

SYNOPSIS

```
#include <math.h>

long int lrint(double x);

long int lrintf(float x);

long int lrintl(long double x);

long long int llrint(double x);

long long int llrintf(float x);

long long int llrintl(long double x);
```

Link with -lm.

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

All functions shown above:

_ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L

DESCRIPTION

These functions round their argument to the nearest integer value, using the cur?

rent rounding direction (see fesetround(3)).

Note that unlike the rint(3) family of functions, the return type of these func?

tions differs from that of their arguments.

RETURN VALUE

These functions return the rounded integer value.

If x is a NaN or an infinity, or the rounded value is too large to be stored in a long (long long in the case of the ll* functions), then a domain error occurs, and the return value is unspecified.

ERRORS

See math_error(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: x is a NaN or infinite, or the rounded value is too large

An invalid floating-point exception (FE_INVALID) is raised.

These functions do not set errno.

VERSIONS

These functions first appeared in glibc in version 2.1.

ATTRIBUTES

For an explanation of the terms used in this section, see attributes(7).

Interface	Attribute	Value
lrint(), lrintf(), lrintl()	Thread safety	MT-Safe
llrint(), llrintf(), llrintl()		

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.
