

Rocky Enterprise Linux 9.2 Manual Pages on command 'probe-bcache.8'

C:\>man probe-bcache.8

probe-bcache(8) System Manager's Manual probe-bcache(8)

NAME

probe-bcache - probe a bcache device

SYNOPSIS

probe-bcache [-o udev] device

OPTIONS

-o return UUID in udev style for invocation by udev rule as IMPORT{program}

USAGE

Return UUID if device identified as bcache-formatted.

Only necessary until support for the bcache superblock is included in blkid; in the meantime, provides just enough functionality for a udev script to create the /dev/disk/by-uuid symlink.
