C:\>man rfdump.1

RDFDUMP(1) Debian Manual RDFDUMP(1)

NAME

rfdump - dumps an RDOFF object in human-readable form

SYNOPSIS

rfdump [-v] <filename>

DESCRIPTION

rfdump prints a list of the header records in an RDOFF object in human-readable form, and optionally prints a hex dump of the contents of the segments.

rfdump supports both version 1 and 2 of RDOFF. It will give warnings if the RDOFF2 format is violated (it looks for incorrect lengths for header records, and checks the overall length count at the start of the file).

OPTIONS

-v Print a hex dump of the contents of the segments.
