RTKITCTL(8) System Manager's Manual RTKITCTL(8)

NAME

rtkitctl - Realtime Policy and Watchdog daemon control

SYNOPSIS

rtkitctl [options]

DESCRIPTION

RealtimeKit is a D-Bus system service that changes the scheduling policy of user processes/threads to SCHED_RR (i.e. realtime scheduling mode) on request. It is intended to be used as a secure mechanism to allow real-time scheduling to be used by normal user processes.

OPTIONS

-h, --help

Show a summary of options.

--version

Show version.

--reset-known

Reset real-time status of known threads.

--reset-all

Reset real-time status of all threads.

--start

Start RealtimeKit if it is not running already.

-k, --exit

Terminate running RealtimeKit daemon.

AUTHOR

RealtimeKit was written by Lennart Poettering <lennart@poettering.net>.
