

## ***Rocky Enterprise Linux 9.2 Manual Pages on command 'showconsolefont.8'***

**C:\>man showconsolefont.8**

SHOWCONSOLEFONT(8)                      Linux Console                      SHOWCONSOLEFONT(8)

### NAME

showconsolefont - Show the current EGA/VGA console screen font

### SYNOPSIS

showconsolefont [ -V | --version ] [ -v ] [ -i ] [ -C console ]

### DESCRIPTION

The showconsolefont command outputs the current console font to stdout. The option -v prints additional information, while the option -V prints the program version number. The option -i doesn't print out the font table, just shows ROWSxCOLSxCOUNT and exits. On Linux 2.6.1 and later, the option -C allows one to indicate the console involved. Its argument is a pathname.
