

Rocky Enterprise Linux 9.2 Manual Pages on command 'subuid.5'

C:\>man subuid.5

SUBUID(5) File Formats and Conversions SUBUID(5)

NAME

subuid - the subordinate uid file

DESCRIPTION

Each line in /etc/subuid contains a user name and a range of subordinate user ids that user is allowed to use. This is specified with three fields delimited by colons (?:?). These fields are:

- ? login name or UID
- ? numerical subordinate user ID
- ? numerical subordinate user ID count

This file specifies the user IDs that ordinary users can use, with the newuidmap command, to configure uid mapping in a user namespace.

Multiple ranges may be specified per user.

When large number of entries (10000-100000 or more) are defined in /etc/subuid, parsing performance penalty will become noticeable. In this case it is recommended to use UIDs instead of login names. Benchmarks have shown speed-ups up to 20x.

FILES

/etc/subuid

Per user subordinate user IDs.

/etc/subuid-

Backup file for /etc/subuid.
