WCSNCAT(3) Linux Programmer's Manual WCSNCAT(3)

NAME

wcsncat - concatenate two wide-character strings

SYNOPSIS

```
#include <wchar.h>

wchar_t *wcsncat(wchar_t *dest, const wchar_t *src, size_t n);
```

DESCRIPTION

The wcsncat() function is the wide-character equivalent of the strncat(3) function.

It copies at most n wide characters from the wide-character string pointed to by src to the end of the wide-character string pointed to by dest, and adds a terminating null wide character (L'\0').

The strings may not overlap.

The programmer must ensure that there is room for at least wcslen(dest)+n+1 wide characters at dest.

RETURN VALUE

wcsncat() returns dest.

ATTRIBUTES

For an explanation of the terms used in this section, see attributes(7).
