

Rocky Enterprise Linux 9.2 Manual Pages on command 'which.1'

C:~>man which.1

WHICH(1) General Commands Manual WHICH(1)

NAME

which - locate a command

SYNOPSIS

which [-a] filename ...

DESCRIPTION

which returns the pathnames of the files (or links) which would be executed in the current environment, had its arguments been given as commands in a strictly POSIX-conformant shell. It does this by searching the PATH for executable files matching the names of the arguments. It does not canonicalize path names.

OPTIONS

-a print all matching pathnames of each argument

EXIT STATUS

- 0 if all specified commands are found and executable
- 1 if one or more specified commands is nonexistent or not executable
- 2 if an invalid option is specified

Debian 29 Jun 2016 WHICH(1)
