NOTES

----- Example 1: Add a WinRM listener to the VMSS -----

```
$VMSS = New-AzVmssConfig  
      Add-AzVmssWinRMLListener -VirtualMachineScaleSet $VMSS -Protocol Https -CertificateUrl  
      "http://keyVaultName.vault.contoso.net/secrets/secretName/secretVersion"
```

This example adds a WinRM listener to the VMSS. The first command uses the New-AzVmssConfig cmdlet to create a VMSS configuration object and stores the result in the

variable named \$VMSS. The second command adds an HTTP protocol WinRM listener with the certificate at the specified URL to the VMSS.
