Windows PowerShell Get-Help on Cmdlet 'Clear-BitLockerAutoUnlock'

PS:\>Get-HELP Clear-BitLockerAutoUnlock -Full

NAME

  Clear-BitLockerAutoUnlock

SYNOPSIS

  Removes BitLocker automatic unlocking keys.

SYNTAX

  Clear-BitLockerAutoUnlock [<CommonParameters>]

DESCRIPTION

   The Clear-BitLockerAutoUnlock cmdlet removes all automatic unlocking keys used by BitLocker Drive Encryption.

BitLocker stores these keys for the fixed data drives of

   a system on a volume that hosts a BitLocker-enabled operating system volume so that it can automatically unlock the

fixed and removable data volumes in a system. This

   makes it easier for users to access data volumes.

   You can configure BitLocker to automatically unlock volumes that do not host an operating system. After a user unlocks

the operating system volume, BitLocker uses

encrypted information stored in the registry and volume metadata to unlock any data volumes that use automatic unlocking.

You must remove automatic unlocking keys before you can disable BitLocker by using the Disable-BitLocker cmdlet. You can use the Disable-BitLockerAutoUnlock cmdlet to

remove keys for specific volumes that use automatic unlocking instead of all volumes.

For an overview of BitLocker, see BitLocker Drive Encryption Overview (https://technet.microsoft.com/en-us/library/cc732774.aspx)on TechNet.

PARAMETERS

  <CommonParameters>

    This cmdlet supports the common parameters: Verbose, Debug,
