

Windows PowerShell Get-Help on Cmdlet 'Disable-DAManualEntryPointSelection'

PS:\>Get-HELP Disable-DAManualEntryPointSelection -Full

NAME

Disable-DAManualEntryPointSelection

SYNOPSIS

Disables a manually selected DirectAccess site, and reverts the selection to the default.

SYNTAX

Disable-DAManualEntryPointSelection [-AsJob] [-CimSession <CimSession[]>] [-Confirm] [-ThrottleLimit <Int32>]
[-WhatIf] [<CommonParameters>]

DESCRIPTION

The Disable-DAManualEntryPointSelection cmdlet disables a manually selected DirectAccess site and reverts the selection to the default.

A client computer configured to use multiple DirectAccess sites automatically selects the best site. A user can override the automatic selection behavior and select a

specific DirectAccess site. This cmdlet disables any manual site that was selected.

You can prevent a user from overriding the automatic selection by using Group Policy. For more information about using Group Policy to restrict automatic selection changes, see `Get-DAClientExperienceConfiguration` .

PARAMETERS

`-AsJob` [`<SwitchParameter>`]

Runs the cmdlet as a background job. Use this parameter to run commands that take a long time to complete.

The cmdlet immediately returns an object that represents the job and then displays the command prompt. You can continue to work in the session while the job completes. To manage the job, use the ``*-Job`` cmdlets. To get the job results, use the `Receive-Job` (<https://go.microsoft.com/fwlink/?LinkID=113372>)cmdlet.

For more information about Windows PowerShell background jobs, see `about_Jobs` (<https://go.microsoft.com/fwlink/?LinkID=113251>).

- Required? false
- Position? named
- Default value False
- Accept pipeline input? False
- Accept wildcard characters? false

`-CimSession` `<CimSession[]>`

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a `New-CimSession` (<https://go.microsoft.com/fwlink/p/?LinkId=227967>) or `[Get-CimSession]`(<https://go.microsoft.com/fwlink/p/?LinkId=227966>)cmdlet. The default is the current session on the local computer.

- Required? false
- Position? named
- Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Confirm [<SwitchParameter>]

Prompts you for confirmation before running the cmdlet.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of `0` is entered, then

Windows PowerShell calculates an optimum throttle limit for the cmdlet based on the number of CIM cmdlets that are running on the computer. The throttle limit

applies only to the current cmdlet, not to the session or to the computer.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-WhatIf [<SwitchParameter>]

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

None

This cmdlet has no input objects.

OUTPUTS

Microsoft.Management.Infrastructure.CimInstance#root/StandardCimv2/MSFT_DASiteTableEntry

NOTES

-- Example 1: Disable the manual DirectAccess site selection --

PS C:\> Disable-DAManualEntryPointSelection

This cmdlet disables any site that was manually selected, and reverts the DirectAccess entry point selection to automatic site selection.
