Windows PowerShell Get-Help on Cmdlet 'Disable-TlsSessionTicketKey'

PS:\>Get-HELP Disable-TlsSessionTicketKey -Full

NAME

   Disable-TlsSessionTicketKey

SYNOPSIS

   Disables a TLS session ticket key.

SYNTAX

   Disable-TlsSessionTicketKey [-ServiceAccountName] <System.Security.Principal.NTAccount> [-Confirm] [-WhatIf]
[<CommonParameters>]

DESCRIPTION

   The `Disable-TlsSessionTicketKey` cmdlet disables an administrator managed Transport Layer Security (TLS) session
ticket key for the service account. The cmdlet

   disables the key for the TLS session by deleting the key and the corresponding rule that uses the key.

   When you disable a TLS session ticket key for the service account, the service account cannot decrypt existing TLS
session tickets. Disabling the TLS session ticket

   key can affect the performance of the TLS server. The TLS server cannot create new session tickets and must negotiate

session information between the client and the

server every time the client connects to the TLS server.

TLS creates a session ticket by using the TLS Session Resumption without Server-Side State mechanism. For more information, see `New-TlsSessionTicketKey` or type

`Get-Help New-TlsSessionTicketKey`.

PARAMETERS

-ServiceAccountName <System.Security.Principal.NTAccount>

Specifies the name of a service account. The cmdlet disables the TLS session ticket key for the service account. Only System, LocalService, NetworkService, and

SID of virtual accounts are supported.

Required?   true

Position?   1

Default value   None
