DESCRIPTION

The Get-AzAutomationSoftwareUpdateRun cmdlet returns a list of software update runs. Since a software update configuration has an associated schedule, it can be

triggered multiple times. Each time a schedule is triggered will result in an update run created. Update run is an aggregate of the result of all machine runs. You

can get runs for specific software update configuration by passing the SoftwareUpdateConfigurationName parameter. To get a specific runs, you need to pass the name

parameter. You can also list runs with specific status, runs targeting specific operating system, or runs started after specific time by passing the appropriate parameter.

-ResourceGroupName <System.String>

Page 3/7

The resource group name.

Required? true

Position? 0

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-SoftwareUpdateConfiguration

<Microsoft.Azure.Commands.Automation.Model.UpdateManagement.SoftwareUpdateConfiguration>

The software update configuration triggered the run.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-SoftwareUpdateConfigurationName <System.String>

Name of the software update configuration triggered the run.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-StartTime <System.DateTimeOffset>

Minimum start time of the run.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-Status

<System.Nullable`1[Microsoft.Azure.Commands.Automation.Model.UpdateManagement.SoftwareUpdateRunStatus]>

Status of the run.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug,

ErrorAction, ErrorVariable, WarningAction, WarningVariable,

OutBuffer, PipelineVariable, and OutVariable. For more information, see

about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).
