```

DESCRIPTION

Lists all the restorable Azure Cosmos DB Tables available for a specific database account. The list would have entries

corresponding to create, replace and delete

events of all live and deleted tables under a specific database account. This list is useful to identify the restore timestamp based on the changes in the collection.

For example, if user wants to restore the database account to a timestamp when a specific table is deleted, the user can find corresponding table delete event from

this list, and choose a timestamp before the delete event for restore.
