### ***Windows PowerShell Get-Help on Cmdlet 'Get-AzExpressRoutePortAuthorization'***

**PS:\>Get-HELP Get-AzExpressRoutePortAuthorization -Full**

WARNING: The names of some imported commands from the module 'Microsoft.Azure.PowerShell.Cmdlets.Network' include unapproved verbs that might make them less discoverable.

To find the commands with unapproved verbs, run the Import-Module command again with the Verbose parameter. For a list of approved verbs, type Get-Verb.

#### **NAME**

Get-AzExpressRoutePortAuthorization

#### **SYNOPSIS**

Gets information about ExpressRoutePort authorizations.

#### **SYNTAX**

Get-AzExpressRoutePortAuthorization

[-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]

-ExpressRoutePortObject <Microsoft.Azure.Commands.Network.Models.PSExpressRoutePort> [-Name <System.String>]

[<CommonParameters>]

#### **DESCRIPTION**

The Get-AzExpressRoutePortAuthorization cmdlet gets information about the authorizations assigned to an ExpressRoutePort object.

ExpressRoutePort. The owner of an ExpressRoutePort can create

these authorizations which generate an authorization key that can be used by a ExpressRoute circuit owner to create the circuit on the ExpressRoutePort (with a

different owner). Only one circuit can be created with one ExpressRoutePort authorization. Authorization keys, as well as other information about the authorization,

can be viewed at any time by running Get-AzExpressRoutePortAuthorization .

## PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with Azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-ExpressRoutePortObject <Microsoft.Azure.Commands.Network.Models.PSExpressRoutePort>

The ExpressRoutePort Object

Required? true

Position? named

Default value None

Accept pipeline input? True (ByValue)

Accept wildcard characters? false

-Name <System.String>

Specifies the name of the ExpressRoutePort authorization that this cmdlet gets.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

#### <CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about\_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

#### INPUTS

Microsoft.Azure.Commands.Network.Models.PSExpressRoutePort

#### OUTPUTS

Microsoft.Azure.Commands.Network.Models.PSExpressRoutePortAuthorization

#### NOTES

#### ----- Example 1 -----

```

These commands return information about all the ExpressRoute authorizations associated with an ExpressRoutePort.

The first command uses the Get-AzExpressRoutePort

cmdlet to create an object reference a ExpressRoutePort named ContosoPort; that object reference is stored in the variable \$ERPort. The second command then uses that

object reference and the Get-AzExpressRoutePortAuthorization cmdlet to return information about the authorizations associated with ContosoPort. You can also specify

the name of the authorization with this command to a specific authorization associated with ContosoPort.
