DESCRIPTION

The Get-AzKeyVaultSecret cmdlet gets secrets in a key vault. This cmdlet gets a specific secret or all the secrets in a key vault.

PARAMETERS

-AsPlainText <System.Management.Automation.SwitchParameter>

When set, the cmdlet will convert secret in secure string to the decrypted plaintext string as output.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-IncludeVersions <System.Management.Automation.SwitchParameter>

Indicates that this cmdlet gets all versions of a secret. The current version of a secret is the first one on the list. If you specify this parameter you must

also specify the Name and VaultName parameters. If you do not specify the IncludeVersions parameter, this cmdlet gets the current version of the secret with the

specified Name .

Required? true

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-InputObject <Microsoft.Azure.Commands.KeyVault.Models.PSKeyVault>

KeyVault Object.

Required? true

Position? 0

Default value None

Accept pipeline input? True (ByValue)

Accept wildcard characters? false

-InRemovedState <System.Management.Automation.SwitchParameter>

Specifies whether to show the previously deleted secrets in the output

This command gets a specific version of the secret named secret1 in the key vault named Contoso.

Example 5: Get the plain text value of the current version of a specific secret

```
$secretText = Get-AzKeyVaultSecret -VaultName 'Contoso' -Name 'ITSecret' -AsPlainText
```

The cmdlet returns the secret as a string when `'-AsPlainText` is applied. Note: When listing secrets, i.e. not providing `'-Name` , the `'-AsPlainText` is ignored.

Example 6: Get all the secrets that have been deleted but not purged for this key vault.

```
Get-AzKeyVaultSecret -VaultName 'Contoso' -InRemovedState
```
