Windows PowerShell Get-Help on Cmdlet 'Get-AzNetworkWatcherSecurityGroupView'

PS:\>Get-HELP Get-AzNetworkWatcherSecurityGroupView -Full

WARNING: The names of some imported commands from the module 'Microsoft.Azure.PowerShell.Cmdlets.Network' include unapproved verbs that might make them less discoverable.

To find the commands with unapproved verbs, run the Import-Module command again with the Verbose parameter. For a list of approved verbs, type Get-Verb.

NAME

Get-AzNetworkWatcherSecurityGroupView

SYNOPSIS

View the configured and effective network security group rules applied on a VM.

SYNTAX

Get-AzNetworkWatcherSecurityGroupView [-AsJob] [-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -Location

<System.String> -TargetVirtualMachineId <System.String> [<CommonParameters>]

Get-AzNetworkWatcherSecurityGroupView [-AsJob] [-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]

-NetworkWatcher <Microsoft.Azure.Commands.Network.Models.PSNetworkWatcher> -TargetVirtualMachineId

<System.String> [<CommonParameters>]

```
Get-AzNetworkWatcherSecurityGroupView      [-AsJob]      [-DefaultProfile  
  <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>  
    -NetworkWatcherName <System.String> -ResourceGroupName <System.String> -TargetVirtualMachineId  
  <System.String> [<CommonParameters>]
```

DESCRIPTION

The Get-AzNetworkWatcherSecurityGroupView cmdlet enables you to view the configured and effective network security group rules applied on a VM.

PARAMETERS

-AsJob <System.Management.Automation.SwitchParameter>

Run cmdlet in the background

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with Azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Location <System.String>

Location of the network watcher.

Required? true
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-NetworkWatcher <Microsoft.Azure.Commands.Network.Models.PSNetworkWatcher>

The network watcher resource.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByValue)
Accept wildcard characters? false

-NetworkWatcherName <System.String>

The name of network watcher.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByValue)
Accept wildcard characters? false

-ResourceGroupName <System.String>

The name of the network watcher resource group.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-TargetVirtualMachineId <System.String>

The target VM Id

Required? true

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

INPUTS

Microsoft.Azure.Commands.Network.Models.PSNetworkWatcher

System.String

OUTPUTS

Microsoft.Azure.Commands.Network.Models.PSSecurityGroupViewResult

NOTES

----- Example 1: Make a Security Group View call on a VM -----

```
$nw = Get-AzResource | Where-Object {$_. ResourceType -eq "Microsoft.Network/networkWatchers" -and $_. Location -eq "WestCentralUS" }

$networkWatcher = Get-AzNetworkWatcher -Name $nw.Name -ResourceGroupName $nw.ResourceGroupName

$VM = Get-AzVM -ResourceGroupName ContosoResourceGroup -Name VM0

Get-AzNetworkWatcherSecurityGroupView -NetworkWatcher $networkWatcher -TargetVirtualMachineId $VM.Id
```

In the above example, we first get the regional Network Watcher, then a VM in the region. Then we make a Security Group View call on the specified VM.
