## DESCRIPTION

The \*\*Get-AzPolicyAssignment\*\* cmdlet gets all policy assignments or particular assignments.

Identify a policy assignment to get by name and scope or by ID.

## PARAMETERS

-InputObject <IPolicyIdentity>

Identity Parameter

To construct, see NOTES section for INPUTOBJECT properties and create a hash table.

Required? false

Position? named

Default value

Accept pipeline input? false

Accept wildcard characters? false

#### -Name <String>

The name of the policy assignment to get.

Required? true

Position? named

Default value

Accept pipeline input? true (ByPropertyName)

Accept wildcard characters? false

#### -Scope <String>

The scope of the policy assignment.

Valid scopes are: management group (format:

'/providers/Microsoft.Management/managementGroups/{managementGroup}'), subscription (format:

'/subscriptions/{subscriptionId}'), resource group (format:

'/subscriptions/{subscriptionId}/resourceGroups/{resourceGroupName}', or resource (format:

'/subscriptions/{subscriptionId}/resourceGroups/{resourceGroupName}/providers/{resourceProviderNamespace}/{parentResourcePath}/{resourceType}/{resourceName}'

Required? false

Position? named

Default value

Accept pipeline input? true (ByPropertyName)

Accept wildcard characters? false

Get all policy assignments that target the given policy definition [fully qualified] ID.

Required? true

Position? named

Default value False

Accept pipeline input? true (ByPropertyName)

Accept wildcard characters? false

#### -PolicyDefinitionId <String>

Get all policy assignments that target the given policy definition [fully qualified] ID.

Required? true

Position? named

Default value

Accept pipeline input? true (ByPropertyName)

Accept wildcard characters? false

#### -Id <String>

The ID of the policy assignment to get.

Use the format '{scope}/providers/Microsoft.Authorization/policyAssignments/{policyAssignmentName}'.

Required? true

Position? named

Default value

Accept pipeline input? true (ByPropertyName)

Accept wildcard characters? false

#### -Filter <String>

The filter to apply on the operation.

Valid values for \$filter are: 'atScope()', 'atExactScope()' or 'policyDefinitionId eq '{value}''.

If \$filter is not provided, no filtering is performed.

If \$filter=atScope() is provided, the returned list only includes all policy assignments that apply to the scope, which is everything in the unfiltered list

except those applied to sub scopes contained within the given scope.

If \$filter=atExactScope() is provided, the returned list only includes all policy assignments that at the given scope.

If \$filter=policyDefinitionId eq '{value}' is provided, the returned list includes all policy assignments of the policy definition whose id is {value}.

Required? false

Position? named

Default value

Accept pipeline input? false

Accept wildcard characters? false

#### -BackwardCompatible [<SwitchParameter>]

Causes cmdlet to return artifacts using legacy format placing policy-specific properties in a property bag object.

Required? false

Position? named

Default value False

Accept pipeline input? false

Accept wildcard characters? false

#### -DefaultProfile <PSObject>

The DefaultProfile parameter is not functional.

Use the SubscriptionId parameter when available if executing the cmdlet against a different subscription.

Required? false

Position? named

Default value

Accept pipeline input? false

Accept wildcard characters? false

#### -Break [<SwitchParameter>]
