Windows PowerShell Get-Help on Cmdlet 'Get-AzResourceGroupDeploymentOperation'

PS:\>Get-HELP Get-AzResourceGroupDeploymentOperation -Full

NAME

   Get-AzResourceGroupDeploymentOperation

SYNOPSIS

   Gets the resource group deployment operation

SYNTAX

                                             Get-AzResourceGroupDeploymentOperation   [-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -DeploymentName

   <System.String> [-Pre] -ResourceGroupName <System.String> [<CommonParameters>]

DESCRIPTION

   The Get-AzResourceGroupDeploymentOperation cmdlet lists all the operations that were part of a deployment to help

you identify and give more information about the

   exact operations that failed for a particular deployment. It can also show the response and the request content for each

deployment operation. This is the same

   information provided in the deployment details on the portal. To get the request and the response content, enable the

setting when submitting a deployment through

New-AzResourceGroupDeployment . It can potentially log and expose secrets like passwords used in the resource property or listKeys operations that are then returned

when you retrieve the deployment operations. For more on this setting and how to enable it, see New-AzResourceGroupDeployment and Debugging ARM template deployments

PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with Azure.

Required?   false

Position?   named

Default value   None

Accept pipeline input?   False

Accept wildcard characters? false

-DeploymentName <System.String>

The deployment name.

Required?   true

Position?   named

Default value   None

Accept pipeline input?   True (ByPropertyName)

Accept wildcard characters? false

-Pre <System.Management.Automation.SwitchParameter>

When set, indicates that the cmdlet should use pre-release API versions when automatically determining which version to use.

Required?   false

Position?   named

Default value   False

Accept pipeline input?   False

Accept wildcard characters? false

  -ResourceGroupName <System.String>

    The resource group name.

    Required?   true

    Position?   named

    Default value   None

    Accept pipeline input?   True (ByPropertyName)

    Accept wildcard characters? false

  <CommonParameters>

    This cmdlet supports the common parameters: Verbose, Debug,

    ErrorAction, ErrorVariable, WarningAction, WarningVariable,

    OutBuffer, PipelineVariable, and OutVariable. For more information, see

    about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

INPUTS

  System.String

               System.Nullable`1[[System.Guid,   System.Private.CoreLib,   Version=4.0.0.0,   Culture=neutral,
PublicKeyToken=7cec85d7bea7798e]]

OUTPUTS

  Microsoft.Azure.Commands.ResourceManager.Cmdlets.SdkModels.PSDeploymentOperation

NOTES

---------------------- Example 1: Get1 ----------------------

Get-AzResourceGroupDeploymentOperation -DeploymentName test -ResourceGroupName test

Gets deployment operation with name "test" under resource group "test"
