### ***Windows PowerShell Get-Help on Cmdlet 'Get-AzSqlCapability'***

**PS:\>Get-HELP Get-AzSqlCapability -Full**

#### **NAME**

Get-AzSqlCapability

#### **SYNOPSIS**

Gets SQL Database capabilities for the current subscription.

#### **SYNTAX**

Get-AzSqlCapability [-LocationName] <System.String> [-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]

[-Defaults] [-Confirm] [-WhatIf] [<CommonParameters>]

Get-AzSqlCapability [-LocationName] <System.String> [-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]

[-EditionName <System.String>] [-ServerVersionName <System.String>] [-ServiceObjectiveName <System.String>]

[-Confirm] [-WhatIf] [<CommonParameters>]

#### **DESCRIPTION**

The Get-AzSqlCapability cmdlet gets the Azure SQL Database capabilities available on the current subscription for a

region. If you specify the ServerVersionName , EditionName , or ServiceObjectiveName parameters, this cmdlet returns the specified values and their predecessors.

## PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Defaults <System.Management.Automation.SwitchParameter>

Indicates that this cmdlet gets only defaults.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-EditionName <System.String>

Specifies the name of the database edition for which this cmdlet gets capabilities.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-LocationName <System.String>

Specifies the name of the Location for which this cmdlet gets capabilities. For more information, see Azure Regions <http://azure.microsoft.com/en-us/regions/> (<http://azure.microsoft.com/en-us/regions/>).

Required? true  
Position? 0  
Default value None  
Accept pipeline input? True (ByPropertyName)  
Accept wildcard characters? false

#### -ServerVersionName <System.String>

Specifies the name of the server version for which this cmdlet gets capabilities.

Required? false  
Position? named  
Default value None  
Accept pipeline input? True (ByPropertyName)  
Accept wildcard characters? false

#### -ServiceObjectiveName <System.String>

Specifies the name of the service objective for which this cmdlet gets capabilities.

Required? false  
Position? named  
Default value None  
Accept pipeline input? True (ByPropertyName)  
Accept wildcard characters? false

#### -Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false  
Position? named

Default value              False

Accept pipeline input?    False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required?                false

Position?                named

Default value            False

Accept pipeline input?   False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug,

ErrorAction, ErrorVariable, WarningAction, WarningVariable,

OutBuffer, PipelineVariable, and OutVariable. For more information, see

about\_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

## INPUTS

System.String

## OUTPUTS

Microsoft.Azure.Commands.Sql.Location\_Capabilities.Model.LocationCapabilityModel

## NOTES

Example 1: Get capabilities for the current subscription for a region

```
Get-AzSqlCapability -LocationName "Central US"
```

Location : Central US

Status : Available

SupportedServerVersions : {12.0, 2.0}

This command returns the capabilities for SQL Database instances on the current subscription for the Central US region.

Example 2: Get default capabilities for the current subscription for a region

```
Get-AzSqlCapability -LocationName "Central US" -Defaults
```

Location : Central US

Status : Available

ExpandedDetails : Version: 2.0 (Default) -> Edition: Standard (Default) -> Service Objective: S0 (Default)

This command returns the default capabilities for SQL Databases on the current subscription in the Central US region.

----- Example 3: Get details for a service objective -----

```
Get-AzSqlCapability -LocationName "Central US" -ServiceObjectiveName "S1"
```

Location : Central US

Status : Available

ExpandedDetails : Version: 12.0 (Available) -> Edition: Standard (Default) -> Service Objective: S1 (Available)

Version: 2.0 (Default) -> Edition: Standard (Default) -> Service Objective: S1 (Available)

This command gets default capabilities for SQL Databases for the specified service objective on the current subscription. Page 5/6
