### ***Windows PowerShell Get-Help on Cmdlet 'Get-AzSqlDatabaseGeoBackup'***

**PS:\>Get-HELP Get-AzSqlDatabaseGeoBackup -Full**

#### **NAME**

Get-AzSqlDatabaseGeoBackup

#### **SYNOPSIS**

Gets a geo-redundant backup of a database.

#### **SYNTAX**

```
Get-AzSqlDatabaseGeoBackup [-ResourceGroupName] <System.String> [-ServerName] <System.String>
[-DatabaseName] <System.String> [-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]
[-ExpandKeyList] [-KeysFilter <System.String>] [-Confirm] [-WhatIf]
[<CommonParameters>]
```

#### **DESCRIPTION**

The Get-AzSqlDatabaseGeoBackup cmdlet gets a specified geo-redundant backup of a SQL database or all available geo-redundant backups on a specified server. A

geo-redundant backup is a restorable resource using data files from a separate geographic location. You can use Geo-Restore to restore a geo-redundant backup in the

event of a regional outage to recover your database to a new region. This cmdlet is also supported by the SQL Server Stretch Database service on Azure.

## PARAMETERS

-DatabaseName <System.String>

Specifies the name of the database to get.

Required? false

Position? 2

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? true

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-ExpandKeyList <System.Management.Automation.SwitchParameter>

Flag to be used to view all the AKV keys in a database.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-KeysFilter <System.String>

Page 2/6

## Timestamp filter to Get AKV keys

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

### -ResourceGroupName <System.String>

Specifies the name of the resource group to which the SQL database server is assigned.

Required? true

Position? 0

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

### -ServerName <System.String>

Specifies the name of the server that hosts the backup to restore.

Required? true

Position? 1

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

### -Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about\_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

## INPUTS

System.String

## OUTPUTS

Microsoft.Azure.Commands.Sql.Backup.Model.AzureSqlDatabaseGeoBackupModel

## NOTES

```
Get-AzSqlDatabaseGeoBackup -ResourceGroupName "ContosoResourceGroup" -ServerName "ContosoServer"
```

This command gets all available geo-redundant backups on a specified server.

----- Example 2: Get a specified geo-redundant backup -----

```
Get-AzSqlDatabaseGeoBackup -ResourceGroupName "ContosoResourceGroup" -ServerName "ContosoServer"  
-DatabaseName "ContosoDatabase"
```

This command gets the database geo-redundant backup named ContosoDatabase.

Example 3: Get all geo-redundant backups on a server using filtering

```
Get-AzSqlDatabaseGeoBackup -ResourceGroupName "ContosoResourceGroup" -ServerName "ContosoServer"  
-DatabaseName "Contoso*"
```

This command gets all available geo-redundant backups on a specified server that start with "Contoso".

Example 4: Get a recoverable database with TDE AKV keys on a server using expand keys

```
Get-AzSqlDatabaseGeoBackup -ResourceGroupName "ContosoResourceGroup" -ServerName "ContosoServer"  
-DatabaseName "Contoso" -ExpandKeyList
```

This command gets a recoverable database configured with CMK with expand keys on a specified server. This filter when used, shows all AKV keys on a database.
