Windows PowerShell Get-Help on Cmdlet 'New-AzApplicationGatewayListener'

PS:\>Get-HELP New-AzApplicationGatewayListener -Full

WARNING: The names of some imported commands from the module 'Microsoft.Azure.PowerShell.Cmdlets.Network' include unapproved verbs that might make them less discoverable.

To find the commands with unapproved verbs, run the Import-Module command again with the Verbose parameter. For a list of approved verbs, type Get-Verb.

NAME

New-AzApplicationGatewayListener

SYNOPSIS

Creates an TCP\TLS listener for an application gateway.

SYNTAX

New-AzApplicationGatewayListener

[-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]

[-FrontendIPConfiguration

<Microsoft.Azure.Commands.Network.Models.PSApplicationGatewayFrontendIPConfiguration>] [-FrontendPort

<Microsoft.Azure.Commands.Network.Models.PSApplicationGatewayFrontendPort>] [-HostNames <System.String[]>]

-Name <System.String> -Protocol {TCP | TLS}

[-SslCertificate <Microsoft.Azure.Commands.Network.Models.PSApplicationGatewaySslCertificate>] [-SslProfile

<Microsoft.Azure.Commands.Network.Models.PSApplicationGatewaySslProfile>] [<CommonParameters>] Page 1/7

New-AzApplicationGatewayListener

[-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]

[-FrontendIPConfigurationId <System.String>] [-FrontendPortId <System.String>] [-HostNames <System.String[]>] -Name

<System.String> -Protocol {TCP | TLS}

[-SslCertificateId <System.String>] [-SslProfileId <System.String>] [<CommonParameters>]

DESCRIPTION

The New-AzApplicationGatewayListener cmdlet creates an TCP\TLS listener for an Azure application gateway.

PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with Azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-FrontendIPConfiguration <Microsoft.Azure.Commands.Network.Models.PSApplicationGatewayFrontendIPConfiguration>

Application gateway FrontendIPConfiguration

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-FrontendIPConfigurationId <System.String>

ID of the application gateway FrontendIPConfiguration

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-FrontendPort <Microsoft.Azure.Commands.Network.Models.PSApplicationGatewayFrontendPort>

Application gateway FrontendPort

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-FrontendPortId <System.String>

ID of the application gateway FrontendPort

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-HostNames <System.String[]>

Host names

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-Name <System.String>

The name of the Listener

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Protocol <System.String>

Protocol

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-SslCertificate <Microsoft.Azure.Commands.Network.Models.PSApplicationGatewaySslCertificate>

Application gateway SslCertificate

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-SslCertificateId <System.String>

ID of the application gateway SslCertificate

Required? false

Position? named

Default value None
Accept pipeline input? False
Accept wildcard characters? false

-SslProfile <Microsoft.Azure.Commands.Network.Models.PSApplicationGatewaySslProfile>

SslProfile

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-SslProfileId <System.String>

SslProfileId

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

None

OUTPUTS

Microsoft.Azure.Commands.Network.Models.PSApplicationGatewayListener

NOTES

----- Example 1: Create an TCP listener -----

```
$Listener = New-AzApplicationGatewayListener -Name "Listener01" -Protocol "Tcp" -FrontendIpConfiguration $Flp01  
-FrontendPort $FP01
```

This command creates an Tcp listener named Listener01 and stores the result in the variable named \$Listener.

----- Example 2: Create an TLS listener with SSL -----

```
$Listener = New-AzApplicationGatewayListener -Name "Listener01" -Protocol "Tls" -FrontendIpConfiguration $Flp01  
-FrontendPort $FP01 -SslCertificate $SSLCert01
```

This command creates an Tls listener that uses SSL offload and provides the SSL certificate in the \$SSLCert01 variable.

The command stores the result in the variable
named \$Listener.
