

Windows PowerShell Get-Help on Cmdlet 'New-AzIntegrationAccountCertificate'

PS:\>Get-HELP New-AzIntegrationAccountCertificate -Full

NAME

New-AzIntegrationAccountCertificate

SYNOPSIS

Creates an integration account certificate.

SYNTAX

```
New-AzIntegrationAccountCertificate -CertificateName <System.String> [-DefaultProfile
    <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -KeyName
<System.String> -KeyVaultId <System.String> -KeyVersion
    <System.String> [-Metadata <System.Object>] -Name <System.String> [-PublicCertificateFilePath <System.String>]
-ResourceGroupName <System.String> [-Confirm] [-WhatIf]
[<CommonParameters>]
```

```
New-AzIntegrationAccountCertificate -CertificateName <System.String> [-DefaultProfile
    <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -KeyName
<System.String> -KeyVaultId <System.String> -KeyVersion
    <System.String> [-Metadata <System.Object>] -Name <System.String> -PublicCertificateFilePath <System.String>
-ResourceGroupName <System.String> [-Confirm] [-WhatIf]
```

[<CommonParameters>]

```
New-AzIntegrationAccountCertificate -CertificateName <System.String> [-DefaultProfile
    <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] [-KeyName
<System.String>] [-KeyVaultId <System.String>] [-KeyVersion
    <System.String>] [-Metadata <System.Object>] -Name <System.String> -PublicCertificateFilePath <System.String>
-ResourceGroupName <System.String> [-Confirm] [-WhatIf]
[<CommonParameters>]
```

DESCRIPTION

The `New-AzIntegrationAccountCertificate` cmdlet creates an integration account certificate. This cmdlet returns an object that represents the integration account certificate. Specify the integration account name, resource group name, certificate name, key name, key version, and key vault ID. Template parameter file values that you specify at the command line take precedence over template parameter values in a template parameter object. This module supports dynamic parameters. To use a dynamic parameter, type it in the command. To discover the names of dynamic parameters, type a hyphen (-) after the cmdlet name, and then press the Tab key repeatedly to cycle through the available parameters. If you omit a required template parameter, the cmdlet prompts you for the value.

PARAMETERS

`-CertificateName <System.String>`

Specifies a name for the integration account certificate.

Required?	true
-----------	------

Position?	named
-----------	-------

Default value	None
---------------	------

Accept pipeline input?	False
------------------------	-------

Accept wildcard characters?	false
-----------------------------	-------

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-KeyName <System.String>

Specifies the name of the certificate key in the key vault.

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-KeyVaultId <System.String>

Specifies a key vault ID.

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-KeyVersion <System.String>

Specifies the version of the certificate key in the key vault.

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Metadata <System.Object>

Specifies a metadata object for the certificate.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Name <System.String>

Specifies the name of an integration account.

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-PublicCertificateFilePath <System.String>

Specifies the path of a public certificate (.cer) file.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-ResourceGroupName <System.String>

Specifies the name of a resource group.

Required? true
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false
Position? named
Default value False
Accept pipeline input? False
Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false
Position? named
Default value False
Accept pipeline input? False
Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see [about_CommonParameters \(https://go.microsoft.com/fwlink/?LinkID=113216\)](https://go.microsoft.com/fwlink/?LinkID=113216).

INPUTS

System.String

OUTPUTS

Microsoft.Azure.Management.Logic.Models.IntegrationAccountCertificate

NOTES

----- Example 1: Create an integration account certificate -----

```
New-AzIntegrationAccountCertificate -ResourceGroupName "ResourceGroup11" -Name "IntegrationAccount31"
-CertificateName "IntegrationAccountCertificate01" -KeyName
                                     "TestKey" -KeyVersion "1.0" -KeyVaultId
"/subscriptions/<subscriptionId>/resourcegroups/ResourceGroup11/providers/microsoft.keyvault/vaults/keyvault"
-PublicCertificateFilePath "c:\temp\Certificate.cer"
```

```
Id
