NOTES

----- Example 1: Delete a Batch job schedule -----

```
Remove-AzBatchJobSchedule -Id "MyJobSchedule" -BatchContext $Context
```

This command deletes the job schedule that has the ID MyJobSchedule. The command prompts you for confirmation before it deletes the job. Use the Get-AzBatchAccountKey cmdlet to assign a context to the \$Context variable.

Example 2: Delete a Batch job without confirmation by using the pipeline

```
Get-AzBatchJobSchedule -Id "MyJobSchedule" -BatchContext $Context | Remove-AzBatchJobSchedule -Force  
-BatchContext $Context
```

This command gets the job schedule that has the ID MyJobSchedule by using the Get-AzBatchJobSchedule cmdlet. The command passes that job schedule to the current

cmdlet by using the pipeline operator. The command deletes that job schedule. Because the command includes the Force parameter, it does not prompt you for confirmation.
