Windows PowerShell Get-Help on Cmdlet 'Remove-AzIntegrationAccountReceivedIcn'

PS:\>Get-HELP Remove-AzIntegrationAccountReceivedIcn -Full

NAME

   Remove-AzIntegrationAccountReceivedIcn

SYNOPSIS

   This cmdlet removes a specific received interchange control number per agreement and control number value.

SYNTAX

      Remove-AzIntegrationAccountReceivedIcn -AgreementName <System.String> [-AgreementType {X12 | Edifact}]
-ControlNumberValue <System.String> [-DefaultProfile

               <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]   -Name
<System.String> -ResourceGroupName <System.String> [-Confirm]

   [-WhatIf] [<CommonParameters>]

DESCRIPTION

   This cmdlet is meant to be used in disaster recovery scenarios to remove a received interchange control number from the

integration account so that the B2B connector

   may process again the message when duplicate number detection is enabled. In rare occasions the received interchange

control number may be reserved shortly before a

disaster and before the B2B connector rejects the interchange as erroneous. In such occasions the operation may want to enable the recovery site to process again the

same interchange after its payload is corrected. Please do provide the "-AgreementType" parameter to specify whether X12 or Edifact control numbers to return

PARAMETERS

-AgreementName <System.String>

The integration account agreement name.

Required?   true

Position?   named

Default value   None

Accept pipeline input?   False

Accept wildcard characters? false

-AgreementType <System.String>

The integration account agreement type.

Required?   false

Position?   named

Default value   None

Accept pipeline input?   False

Accept wildcard characters? false

-ControlNumberValue <System.String>

The integration account control number value.

Required?   true

Position?   named

Default value   None

Accept pipeline input?   False

Accept wildcard characters? false

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

    The credentials, account, tenant, and subscription used for communication with azure

    Required?   false

    Position?   named

    Default value   None

    Accept pipeline input?   False

    Accept wildcard characters? false

-Name <System.String>

    The integration account name.

    Required?   true

    Position?   named

    Default value   None

    Accept pipeline input?   False

    Accept wildcard characters? false

-ResourceGroupName <System.String>

    The integration account resource group name.

    Required?   true

    Position?   named

    Default value   None

    Accept pipeline input?   True (ByPropertyName)

    Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

    Prompts you for confirmation before running the cmdlet.

    Required?   false

    Position?   named

Default value   False

Accept pipeline input?   False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required?   false

Position?   named

Default value   False

Accept pipeline input?   False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug,

ErrorAction, ErrorVariable, WarningAction, WarningVariable,

OutBuffer, PipelineVariable, and OutVariable. For more information, see

about_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).

INPUTS

System.String

OUTPUTS

System.Void

NOTES

-------------------------- Example 1 --------------------------

  "000000641"

    Get-AzIntegrationAccountReceivedIcn : The existing received control number '000000641' for agreement 'X12AgreementName' is not in a valid format.

  At line:1 char:1

  + Get-AzIntegrationAccountReceivedIcn -ResourceGroupName "groupName ...

  + ~~~~~~

    + CategoryInfo   : CloseError: (:) [Get-AzIntegrationAccountReceivedIcn], PSInvalidOperationException

                                                        +   FullyQualifiedErrorId   :

Microsoft.Azure.Commands.LogicApp.Cmdlets.GetAzureIntegrationAccountReceivedIcnCommand

    Remove-AzIntegrationAccountReceivedIcn -AgreementType "X12" -ResourceGroupName "groupName" -Name "accountName" -AgreementName "X12AgreementName" -ControlNumberValue

  "000000641"

    Get-AzIntegrationAccountReceivedIcn -AgreementType "X12" -ResourceGroupName "groupName" -Name "accountName" -AgreementName "X12AgreementName" -ControlNumberValue

  "000000641"

  Get-AzIntegrationAccountReceivedIcn : The session 'X12-ICN-X12AgreementName-000000641' could not be found in integration account 'accountName'.

  At line:1 char:1

  + Get-AzIntegrationAccountReceivedIcn -ResourceGroupName "groupName ...

  + ~~~~~~

    + CategoryInfo   : CloseError: (:) [Get-AzIntegrationAccountReceivedIcn], CloudException

                                                        +   FullyQualifiedErrorId   :

Microsoft.Azure.Commands.LogicApp.Cmdlets.GetAzureIntegrationAccountReceivedIcnCommand

  Attempts to get a received X12 interchange control number which content is not in a valid format. Removes the received

X12 interchange control number. Confirms the

received X12 interchange control number was removed by attempting to get it again.

-------------------------- Example 2 --------------------------

Get-AzIntegrationAccountReceivedIcn -AgreementType "Edifact" -ResourceGroupName "groupName" -Name "accountName" -AgreementName "EdifactAgreementName"

  -ControlNumberValue "000000641"

Get-AzIntegrationAccountReceivedIcn : The existing received control number '000000641' for agreement 'EdifactAgreementName' is not in a valid format.

  At line:1 char:1

  + Get-AzIntegrationAccountReceivedIcn -ResourceGroupName "groupName ...

  + ~~~~~~

    + CategoryInfo   : CloseError: (:) [Get-AzIntegrationAccountReceivedIcn], PSInvalidOperationException

                                                                + FullyQualifiedErrorId :

Microsoft.Azure.Commands.LogicApp.Cmdlets.GetAzureIntegrationAccountReceivedIcnCommand

Remove-AzIntegrationAccountReceivedIcn -AgreementType "Edifact" -ResourceGroupName "groupName" -Name "accountName" -AgreementName "EdifactAgreementName"

  -ControlNumberValue "000000641"

Get-AzIntegrationAccountReceivedIcn -AgreementType "Edifact" -ResourceGroupName "groupName" -Name "accountName" -AgreementName "EdifactAgreementName"

  -ControlNumberValue "000000641"

Get-AzIntegrationAccountReceivedIcn : The session 'Edifact-ICN-EdifactAgreementName-000000641' could not be found in integration account 'accountName'.

  At line:1 char:1

  + Get-AzIntegrationAccountReceivedIcn -ResourceGroupName "groupName ...

  + ~~~~~~

    + CategoryInfo   : CloseError: (:) [Get-AzIntegrationAccountReceivedIcn], CloudException

                                                                + FullyQualifiedErrorId :

Microsoft.Azure.Commands.LogicApp.Cmdlets.GetAzureIntegrationAccountReceivedIcnCommand

Attempts to get a received Edifact interchange control number which content is not in a valid format. Removes the received Edifact interchange control number.

Confirms the received Edifact interchange control number was removed by attempting to get it again.
