## **Windows PowerShell Get-Help on Cmdlet 'Remove-AzNotificationHubsNamespaceAuthorizationRule'**

**PS:\>Get-HELP Remove-AzNotificationHubsNamespaceAuthorizationRule -Full**

### **NAME**

Remove-AzNotificationHubsNamespaceAuthorizationRule

### **SYNOPSIS**

Removes an authorization rule from a notification hub namespace.

### **SYNTAX**

```
Remove-AzNotificationHubsNamespaceAuthorizationRule [-ResourceGroup] <System.String> [-Namespace]
<System.String> [-AuthorizationRule] <System.String>
[-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]
[-Force] [-Confirm] [-WhatIf] [<CommonParameters>]
```

### **DESCRIPTION**

The Remove-AzNotificationHubsNamespaceAuthorizationRule cmdlet removes a Shared Access Signature (SAS) authorization rule from a notification hub namespace.

Authorization rules manage access to a namespace. This is done by through the creation of links, as URIs, based on different permission levels. Permission levels can

be of the following: - Listen

- Send

- Manage

Clients are directed to one of these URIs based on the appropriate permission level. For instance, a client given the Listen permission is directed to the URI for that permission. Removing an authorization rule also removes the corresponding user permission.

## PARAMETERS

-AuthorizationRule <System.String>

Specifies the name of the SAS authentication rule to be removed.

Required? true

Position? 2

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Force <System.Management.Automation.SwitchParameter>

Do not ask for confirmation.

Required? false

Position? named  
Default value False  
Accept pipeline input? False  
Accept wildcard characters? false

-Namespace <System.String>

Specifies the namespace to which the authorization rules are assigned. Namespaces provide a way to group and categorize notification hubs.

Required? true  
Position? 1  
Default value None  
Accept pipeline input? True (ByPropertyName)  
Accept wildcard characters? false

-ResourceGroup <System.String>

Specifies the resource group to which the namespace is assigned. Resource groups organize items such as namespaces, notification hubs, and authorization rules in ways that help simplify inventory management and Azure administration.

Required? true  
Position? 0  
Default value None  
Accept pipeline input? True (ByPropertyName)  
Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false  
Position? named  
Default value False  
Accept pipeline input? False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about\_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

## INPUTS

System.String

## OUTPUTS

System.Boolean

## NOTES

```
Remove-AzNotificationHubsNamespaceAuthorizationRule -Namespace "ContosoNamespace" -ResourceGroup "ContosoNotificationsGroup" -AuthorizationRule "ListenRule"
```

This command removes the authorization rule named ListenRule from the namespace named ContosoNamespace. When you run this command you must specify the resource group that the namespace is assigned to.
