

Windows PowerShell Get-Help on Cmdlet 'Remove-AzPolicyAttestation'

PS:\>Get-HELP Remove-AzPolicyAttestation -Full

NAME

Remove-AzPolicyAttestation

SYNOPSIS

Deletes a policy attestation.

SYNTAX

```

Remove-AzPolicyAttestation [-DefaultProfile
<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -InputObject
<Microsoft.Azure.Commands.PolicyInsights.Models.Attestations.PSAttestation> [-PassThru] [-Confirm] [-WhatIf]
[<CommonParameters>]

Remove-AzPolicyAttestation [-DefaultProfile
<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -Name <System.String>
[-PassThru] [-ResourceGroupName <System.String>] [-Scope <System.String>] [-Confirm] [-WhatIf]
[<CommonParameters>]

```

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

[-PassThru]

-ResourceId

<System.String> [-Confirm] [-WhatIf] [<CommonParameters>]

DESCRIPTION

The Remove-AzPolicyAttestation cmdlet deletes a policy attestation.

PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with Azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-InputObject <Microsoft.Azure.Commands.PolicyInsights.Models.Attestations.PSAttestation>

The Attestation object.

Required? true

Position? named

Default value None

Accept pipeline input? True (ByValue)

Accept wildcard characters? false

-Name <System.String>

Resource name.

Required? true

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-PassThru <System.Management.Automation.SwitchParameter>

Return True if the command completes successfully.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-ResourceGroupName <System.String>

Resource group name.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-ResourceId <System.String>

Resource ID.

Required? true

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-Scope <System.String>

Scope of the resource. E.g. '/subscriptions/{subscriptionId}/resourceGroups/{rgName}'.

Required? false
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false
Position? named
Default value False
Accept pipeline input? False
Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false
Position? named
Default value False
Accept pipeline input? False
Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

System.String

Microsoft.Azure.Commands.PolicyInsights.Models.Attestations.PSAttestation

OUTPUTS

System.Boolean

NOTES

Example 1: Delete a policy remediation by name at subscription scope.

```
Set-AzContext -Subscription "d1acb22b-c876-44f7-b08e-3fcf9f6767f4"
```

```
Remove-AzPolicyAttestation -Name "attestation-subscription" -PassThru
```

True

This command deletes the attestation named 'attestation-subscription' in subscription "d1acb22b-c876-44f7-b08e-3fcf9f6767f4". The ``-PassThru`` switch forces the cmdlet to return the status of the operation.

Example 2: Delete a policy remediation via piping at resource group.

```
$rgName = "ps-attestation-test-rg"
```

```
Get-AzPolicyAttestation -Name "attestation-RG" -ResourceGroupName $rgName | Remove-AzPolicyAttestation
```

This command deletes the attestation named 'attestation-RG' at resource group 'ps-attestation-test-rg' using input object given by the Get-AzPolicyAttestation cmdlet.

--- Example 3: Delete a policy remediation using ResourceId. ---

```

$scope = "/subscriptions/d1acb22b-c876-44f7-b08e-3fc9f6767f4/resourceGroups/ps-attestation-test-rg/providers/Microsoft.Network/networkSecurityGroups/pstests0"

$attestationToDelete = Get-AzPolicyAttestation -Name "attestation-resource" -Scope $scope
Remove-AzPolicyAttestation -Id $attestationToDelete.Id
```

The first command gets an attestation named 'attestation-resource' with a resource id supplied as scope. The second command then deletes the attestation using the resource id of the stored attestation.
