Windows PowerShell Get-Help on Cmdlet 'Remove-AzRoutingPolicy'

PS:\>Get-HELP Remove-AzRoutingPolicy -Full

WARNING: The names of some imported commands from the module 'Microsoft.Azure.PowerShell.Cmdlets.Network' include unapproved verbs that might make them less discoverable.

To find the commands with unapproved verbs, run the Import-Module command again with the Verbose parameter. For a list of approved verbs, type Get-Verb.

NAME

Remove-AzRoutingPolicy

SYNOPSIS

Removes the specified routing policy from a routing intent resource associated with a VirtualHub.

SYNTAX

Remove-AzRoutingPolicy

[-DefaultProfile

<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -Name <System.String>

-RoutingIntent <Microsoft.Azure.Commands.Network.Models.PSRoutingIntent> [-Confirm] [-WhatIf]

[<CommonParameters>]

DESCRIPTION

Page 1/6

Removes the specified routing Policy that is associated with the specified routing intent object and returns an in-memory routing intent object which can be piped to

Set-AzRoutingIntent (./Set-AzRoutingIntent.md)to update the actual routing intent resource.

PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with Azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Name <System.String>

The policy name.

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-RoutingIntent <Microsoft.Azure.Commands.Network.Models.PSRoutingIntent>

The routing intent object from which this routing policy has to be removed.

Required? true

Position? named

Default value None

Accept pipeline input? True (ByPropertyName, ByValue)

Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

INPUTS

Microsoft.Azure.Commands.Network.Models.PSRoutingIntent

System.String

OUTPUTS

NOTES

----- Example 1 -----

```
New-AzVirtualWan -ResourceGroupName "testRg" -Name "testWan" -Location "westcentralus" -VirtualWANType
