DESCRIPTION

This command will delete the specified cloud endpoint from a sync group. The Azure file share the cloud endpoint references remains untouched by this process. This

command is only intended for decommissioning. Removing a cloud endpoint is a destructive operation. Server endpoints cannot sync without at least one cloud endpoint

present. This operation should not be performed to solve sync issues. If this Azure file share is added again to the same sync group, as a cloud endpoint, it can lead

to conflict files and other unintended consequences.
