

Windows PowerShell Get-Help on Cmdlet 'Remove-AzTrafficManagerExpectedStatusCodeRange'

PS:\>Get-HELP Remove-AzTrafficManagerExpectedStatusCodeRange -Full

NAME

Remove-AzTrafficManagerExpectedStatusCodeRange

SYNOPSIS

Removes an expected status code range from a local Traffic Manager profile object.

SYNTAX

```
Remove-AzTrafficManagerExpectedStatusCodeRange [-DefaultProfile  
<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] -Min  
<System.Int32> -TrafficManagerProfile <Microsoft.Azure.Commands.TrafficManager.Models.TrafficManagerProfile>  
[-Confirm] [-WhatIf] [<CommonParameters>]
```

DESCRIPTION

The Remove-AzTrafficManagerExpectedStatusCodeRange cmdlet removes a range of expected status codes from a local Azure Traffic Manager profile object. You can get a profile by using the New-AzTrafficManagerProfile or Get-AzTrafficManagerProfile cmdlets.

This cmdlet operates on the local profile object. Commit your changes to the profile for Traffic Manager by using the

Set-AzTrafficManagerProfile cmdlet.

PARAMETERS

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Min <System.Int32>

Specifies the lowest value in the status code range to be removed.

Required? true

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-TrafficManagerProfile <Microsoft.Azure.Commands.TrafficManager.Models.TrafficManagerProfile>

Specifies a local TrafficManagerProfile object. This cmdlet modifies this local object. To obtain a TrafficManagerProfile object, use the

Get-AzTrafficManagerProfile cmdlet.

Required? true

Position? named

Default value None

Accept pipeline input? True (ByValue)

Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

Microsoft.Azure.Commands.TrafficManager.Models.TrafficManagerProfile

OUTPUTS

Microsoft.Azure.Commands.TrafficManager.Models.TrafficManagerProfile

NOTES

Example 1: Remove an expected status code range from a profile

```
$TrafficManagerProfile = Get-AzTrafficManagerProfile -Name "ContosoProfile" -ResourceGroupName  
"ResourceGroup11"
```

```
Remove-AzTrafficManagerExpectedStatusCodeRange -TrafficManagerProfile $TrafficManagerProfile -Min 200
```

```
Set-AzTrafficManagerProfile -TrafficManagerProfile $TrafficManagerProfile
```

The first command gets an Azure Traffic Manager profile by using the `Get-AzTrafficManagerProfile` cmdlet. The second command removes an expected status code range from

the profile stored in `$TrafficManagerProfile`. The final command updates the profile in Traffic Manager to match the local value in `$TrafficManagerProfile`.
