The Remove-NetLbfoTeamNic cmdlet removes a team interface from the NIC team. The name of a team interface is the team name followed by the VLAN value of this team

interface. You can identify a team interface either by its name, its associated VLAN ID, or its default property. *Page 1/6*

This cmdlet does not remove the team interface created when the team was created. To remove the team interface created when the team was created, you must remove the team by using the Remove-NetLbfoTeam cmdlet.
