# Windows PowerShell Get-Help on Cmdlet 'Remove-NetSwitchTeamMember'

PS:\>Get-HELP Remove-NetSwitchTeamMember -Full

NAME

Remove-NetSwitchTeamMember

#### **SYNOPSIS**

Removes a network adapter member from a switch team.

### **SYNTAX**

Remove-NetSwitchTeamMember [-Name] <String> [-Team] <String> [-AsJob] [-CimSession <CimSession[]>] [-ThrottleLimit <Int32>] [<CommonParameters>]

#### **DESCRIPTION**

The Remove-NetSwitchTeamMember cmdlet removes a network adapter team member from the specified switch team.

The specified switch team must be an existing switch team.

The member designated must exist in the specified switch team.

# **PARAMETERS**

Runs the cmdlet as a background job. Use this parameter to run commands that take a long time to complete.

Required?

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

false

# -CimSession <CimSession[]>

Runs the cmdlet in a remote session or on a remote computer. Enter a computer name or a session object, such as the output of a New-CimSession

(https://go.microsoft.com/fwlink/p/?LinkId=227967)

or

[Get-CimSession](https://go.microsoft.com/fwlink/p/?LinkId=227966)cmdlet. The default is the current session on the local computer.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

## -Name <String>

Specifies the name of the switch team member or an object that represents a part of a switch team. The adapter names are the IfAlias names, such as Ethernet 2.

Required? true

Position? 0

Default value None

Accept pipeline input? False

Accept wildcard characters? false

### -Team <String>

Specifies the name of switch team from which to remove the network adapter. The switch team must alread and

must be a switch team.

Required? true

Position? 1

Default value None

Accept pipeline input? False

Accept wildcard characters? false

### -ThrottleLimit <Int32>

Specifies the maximum number of concurrent operations that can be established to run the cmdlet. If this parameter is omitted or a value of `0` is entered, then

Windows PowerShellr calculates an optimum throttle limit for the cmdlet based on the number of CIM cmdlets that are running on the computer. The throttle limit

applies only to the current cmdlet, not to the session or to the computer.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

#### <CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug,

ErrorAction, ErrorVariable, WarningAction, WarningVariable,

OutBuffer, PipelineVariable, and OutVariable. For more information, see

about\_CommonParameters (https:/go.microsoft.com/fwlink/?LinkID=113216).
